The following is a copy of Applicant's claims that identifies language being added with underlining ("___") and language being deleted with strikethrough ("—_"), as is applicable:

1. (Previously presented) A method for operating a measurement and testing instrument configured to measure a characteristic of a device-under-test, the method comprising the steps of:

receiving a first user input provided via a first component of a pointing device;
moving a cursor displayed on a display device responsive to the first user
input;

receiving a second user input provided by rotating a second component of the pointing device; and

modifying an item displayed on the display device responsive to the second user input and responsive to where the cursor is located when the second user input is received, the item corresponding to a measurable characteristic of the device-under-test.

- 2. (Original) The method of claim 1, wherein the item is displayed near the cursor when the second user input is received.
- 3. (Original) The method of claim 2, wherein the method is implemented by one of an oscilloscope, a spectrum analyzer, a logic analyzer, a vector analyzer, a network analyzer, and a time interval analyzer.

Serial No.: 10/638,217

4. (Original) The method of claim 1, wherein the pointing device comprises one of a mouse, a touch-pad, a track-ball and a joystick.

- 5. (Original) The method of claim 1, wherein the item specifies one of a display setting and a measurement setting.
- 6. (Original) The method of claim 1, further comprising modifying a measurement result displayed by the display device responsive to the second user input.
- 7. (Original) The method of claim 6, wherein the measurement result comprises at least one of a waveform and a measurement value.
- 8. (Original) The method of claim 1, wherein the second component comprises a rolling mechanism.
- 9. (Original) The method of claim1, wherein an icon is displayed next to the cursor to indicate that the item is responsive to rotating the second component of the pointing device.
- 10. (Previously presented) A measurement and testing system comprising:

 an input-execution module for modifying an item displayed on a display

 device responsive to a second user input provided by rotating a second

 component of a pointing device, the item corresponding to a

 measurable characteristic of a device-under-test; and

Serial No.: 10/638,217 Art Unit: 2857

an input-dispatch module for passing the second user input to the inputexecution module responsive to a cursor being displayed at a location
corresponding to the input-execution module, wherein a location of the
cursor is responsive to a first user input provided by a first component
of the pointing device.

- 11. (Previously presented) The measurement and testing system of claim 10, wherein the item specifies one of a display setting and a measurement setting.
- 12. (Previously presented) The measurement and testing system of claim 10, wherein the measurement and testing instrument is one of an oscilloscope, a spectrum analyzer, a logic analyzer, a vector analyzer, a network analyzer, and a time interval analyzer.
- 13. (Previously presented) The measurement and testing system of claim 10, wherein the first and second user inputs are provided by a pointing device selected from a group consisting of one of a mouse, a touch-pad, a track-ball and a joystick.

14-18. (Canceled)

19. (Previously presented) A measurement and testing system comprising:
means for receiving a first user input provided via a first component of a pointing device and a second user input provided by rotating a second component of the pointing device;

Serial No.: 10/638,217 Art Unit: 2857

means for moving a cursor displayed on a display device responsive to the first user input;

means for modifying an item displayed on the display device responsive to the second user input and responsive to where the cursor is located when the second user input is received, the item corresponding to a measurable characteristic of a device-under-test.

- 20. (Previously presented) The measurement and testing system of claim 19, wherein the method is implemented by one of an oscilloscope, a spectrum analyzer, a logic analyzer, a vector analyzer, a network analyzer, and a time interval analyzer.
- 21. (Previously presented) The measurement and testing system of claim 19, wherein the pointing device comprises one of a mouse, a touch-pad, a track-ball and a joystick.
- 22. (Previously presented) The measurement and testing system of claim 19, wherein an icon is displayed next to the cursor to indicate that the item is responsive to rotating the second component of the pointing device.
